

TS Question bank

Project : Basic Calculation Assignment

1. Create a function that takes two numbers, **25** and **35**, and returns their total sum.
2. Define three variables num1, num2, and num3 with values of your choice and find their sum.
3. Write a program to add **150** and **250** and store the result in a variable named grandTotal.
4. Create a logic to increase the value of a variable score from **80** to **90** using the + operator.
5. Write a script to combine (add) **99** and **1** and print the result to the console.
6. Write a function to subtract 45 from 100 and return the remaining value.
7. Create a variable walletBalance with 500 and subtract an expense of 120 from it.
8. Find the difference between 2000 and 850 using TypeScript variables.
9. Write code to decrease a variable stock by 5 units using the -= operator.
10. Calculate how much more 150 is than 75 by using subtraction.
11. Write a function that accepts one number and returns that number multiplied by **10**.

12. Calculate the total price of **5** items if each item costs **\$15**.
13. Create a program to find the product of **12** and **12**.
14. Write a script to calculate the area of a rectangle where length is **20** and width is **10**.
15. Use a variable to triple the value of **30** and print the output.
16. Create a function to divide **100** by **4** and return the result.
17. Write a program to split **50** chocolates equally among **5** friends.
18. Use TypeScript to find the **half** of **1500**.
19. Find the quotient when **81** is divided by **9**.
20. Use the **Modulus (%)** operator to find the remainder when **10** is divided by **3**.
